Pre-Owned Aircraft vs. bop Aero Shared Ownership

A pre-owned aircraft can look like the economical choice. The purchase price is only the start: the owner alone carries every fixed cost, every inspection, and the timing of the next engine. Below, one owner buys a comparable pre-owned aircraft outright and flies it as much as **one bop Aero share** allows. Every aircraft shown has **known-ice protection (FIKI)**, **air conditioning**, and carries at least the matching bop Aero aircraft's payload on a typical trip.

Pre-owned piston aircraft vs. a bop Aero SR22T share · 96 flight hours a year, the hours one share provides

AIRCRAFT	CAPITAL REQUIRED	EST. ANNUAL COST*	PER FLIGHT HOUR	NEXT MAJOR COST TO PLAN FOR
bop Aero SR22T G7+ share New aircraft · 1 of 14 shares	**$114,148**	**$36,403**	**$379**	**None to budget: maintenance, reserve and replacement are in the fixed Annual Program Fee**
Piper Malibu Mirage 2008–2014, pre-owned, owned alone	~$900K	~$77,000	~$800	Engine overhaul · ~$95K
Beechcraft Baron G58 2008–2012, pre-owned, owned alone	~$1.07M	~$94,000	~$980	Two engine overhauls · ~$150K
Diamond DA62 2017–2019, pre-owned, owned alone	~$1.25M	~$97,000	~$1,010	Two Austro engine replacements · ~$160K

Pre-owned turbine aircraft vs. a bop Aero SF50 G3 share · 175 flight hours a year, the hours one share provides

AIRCRAFT	CAPITAL REQUIRED	EST. ANNUAL COST*	PER FLIGHT HOUR	NEXT MAJOR COST TO PLAN FOR
bop Aero SF50 G3 share New aircraft · 1 of 8 shares	**$570,431**	**$136,279**	**$779**	**None to budget: maintenance, reserve and replacement are in the fixed Annual Program Fee**
Cessna Citation Mustang 2007–2012, pre-owned, owned alone	~$1.7M	~$220,000	~$1,260	Two engine overhauls if not on a program · ~$800K
Cirrus SF50 Vision Jet G1 2016–2018, pre-owned, owned alone	~$1.85M	~$245,000	~$1,400	Engine overhaul if not on a program · ~$500K
Daher Kodiak 100 2014–2018, pre-owned, owned alone	~$2.2M	~$155,000	~$890	Engine overhaul if not on a program · ~$300K
Daher TBM 850 2006–2012, pre-owned, owned alone	~$2.35M	~$209,000	~$1,190	Engine overhaul if not on a program · ~$350K
Embraer Phenom 100 2009–2014, pre-owned, owned alone	~$2.7M	~$264,000	~$1,510	Two hot sections if not on a program · ~$230K
Pilatus PC-12/47 2006–2008, pre-owned, owned alone	~$3.25M	~$229,000	~$1,310	Engine overhaul if not on a program · ~$550K

** Pre-owned: insurance, hangar, inspections, subscriptions, unscheduled maintenance, an engine program or overhaul reserve, and 3% yearly depreciation. bop Aero: the Annual Program Fee, which includes maintenance, fixed costs, management and the Future Value Reserve. Fuel and pilot are excluded on both sides. Pre-owned figures (~) are planning estimates from market listings and published operating data; see page 2.*

Why predictability matters

- **Availability.** When an older aircraft is down for parts or an overdue repair, it does not fly. A bop Aero aircraft is new, under factory warranty and support, and its replacement is funded by the Future Value Reserve, so the costs and the schedule are known in advance.
- **Uneven engine timing.** Engine makers set a calendar limit as well as an hours limit. At 96 hours a year, a piston engine reaches the 12-year limit after about 1,152 hours, well before its overhaul time, so a low-use owner pays for an overhaul sooner than the logbook suggests. Every pre-owned aircraft is at a different point in that cycle.
- **Large one-time costs.** Overhauls, hot sections and avionics upgrades arrive in lumps and can approach a sizable share of the aircraft's price. Turbine engine programs smooth the engine cost into an hourly rate, which this comparison includes.
- **Capital.** A share needs a fraction of the capital of buying an aircraft outright, leaving the rest of the money free.

> **An honest note:** most of the difference in annual cost comes from sharing. A sole owner pays all of the insurance, hangar and inspections alone; a share spreads them across the owners. Age adds variability on top of that, especially the timing of engines, parts and shop availability.

Equipment, payload and support

AIRCRAFT	FIKI	AIR CONDITIONING	TRIP PAYLOAD	SUPPORT STATUS
Piper Malibu Mirage	Factory option	Factory option	~800 lb	Needs a PA-46 specialist shop; Mirage line continues as the M350
Beechcraft Baron G58	Factory option	Factory option	~860 lb	Production ending (Textron, Nov 2025); broad Beechcraft shop network
Diamond DA62	Factory option	Factory option	~1090 lb	In production; owners report Austro parts delays and limited service centers
Cessna Citation Mustang	Standard	Standard	~1150 lb	Out of production (2017); Textron support; small fleet (~470)
Cirrus SF50 Vision Jet G1	Factory option	Factory option	~1050 lb	Cirrus factory support; cannot be upgraded to G2 performance
Daher Kodiak 100	Factory option	Factory option	~1630 lb	In production (Daher); unpressurized
Daher TBM 850	Standard	Factory option	~1070 lb	Superseded by the TBM 900 series; Daher support
Embraer Phenom 100	Standard	Standard	~1040 lb	Embraer support; early brake service bulletins; engine calendar inspection at 12 years
Pilatus PC-12/47	Standard	Factory option	~2230 lb	Strong resale; pre-NG avionics, interior removal for upgrades; equipped examples are rare

Trip payload: useful load minus fuel for the trip plus a 45-minute reserve: 500 nm for pistons (bop Aero SR22T: ~750 lb), 900 nm for turbines (bop Aero SF50 G3: ~1020 lb). Pre-owned figures assume an example equipped with FIKI and air conditioning.

How the figures are built

Basis: one owner buys the pre-owned aircraft outright; compared with one bop Aero share. Pistons are costed at 96 hours a year (one SR22T share), turbines at 175 hours (one SF50 G3 share).

Capital required: typical asking price of an equipped example, versus the share's Program Cost. Depreciation: 3% of the price each year.

Engines: enrolled engine-program hourly rate for turbines; for pistons, an overhaul reserve over the hours limit or the 12-year calendar limit, whichever comes first.

Excluded on both sides: fuel, oil and pilot. Aircraft without FIKI, air conditioning or the trip payload are not shown.

Estimates, not quotes: individual aircraft vary with condition, engine time, equipment and location. bop Aero figures are the current published program figures.
